EDUCATION

- Manipal University Jaipur** Jaipur, India
Bachelor of Technology - Information Technology 2017 - 2021
Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Machine Learning, Networking, Databases

SKILLS SUMMARY

Languages: JavaScript, Python, C#, C, SQL	Database: PostgreSQL, Firebase
Frontend: ReactJS, Angular, HTML, CSS	Backend: .NET, Node.js
Development Tools: Git, Kubernetes, AWS	Concepts: REST APIs, Microservices, CI/CD, Agile

EXPERIENCE

- Rightsline** Noida
Software Engineer Sep 2021 - Present
 - Product Approvals:**
 - * Architected a 100MB+ document ingestion pipeline using **.NET APIs and background jobs** to asynchronously process, normalize, and consolidate files into searchable PDFs for review workflows.
 - * Designed a role-based PDF annotation system using a **third-party SDK**, persisting annotations as structured JSON and dynamically rendering **internal vs external layers** based on user permissions.
 - * Built collaborative approval workflows (comments, file uploads, status tracking) with **Angular frontend and REST APIs**, enabling structured review cycles and replacing fragmented email-based processes.
 - * Designed backend workflows for reliable document processing, annotation persistence, and file transformation pipelines.
 - Statement Ingestion:**
 - * Developed a CSV/Excel ingestion module for royalty reporting with upload, validation, and processing workflows using **Angular and .NET APIs**.
 - * Implemented a schema mapping and validation engine (sheet selection, header detection, fuzzy column matching using Levenshtein distance) to transform external data into platform-compatible formats.
 - * Built an **AG Grid-based** preview interface enabling inline error correction and seamless submission to backend services.
 - * Enabled ingestion of **large structured datasets** (thousands of rows per upload), reducing manual data preparation and improving processing efficiency.
 - RightsLogic:**
 - * Built a file ingestion pipeline using **Node.js** and **SQLite** for staging/validation before persisting clean data into **PostgreSQL**.
 - * Implemented **multi-tenant architecture** with isolated databases per client, improving scalability and cost efficiency.
 - * Optimized build pipeline using **esbuild** and **Webpack**, reducing build time **from 20 min to 6 min (~70%)**.
 - Tech Stack:** Angular, .NET, C#, SQL, ReactJS, Node.js, PostgreSQL, REST APIs

PROJECTS

- Sift — AI Video Summarization Engine (NLP, Transformers, Chrome Extension):** *Source Code* (Work in progress)
Designed and built an AI system to summarize YouTube videos using a hybrid pipeline combining Sentence-BERT (semantic extraction) and BART (abstractive summarization). Designed a Chrome extension integration for real-time video summarization.
Tech: Python, Transformers, Sentence-BERT, BART
- CineSync — Movie Streaming Web App:** *Source Code* (Work in progress)
Built a movie streaming web application using React, with Firebase-based authentication and data storage. Implemented live search using Fuse.js, modular UI with Styled Components, and seamless navigation with React Router. Implemented client-side routing and modular component architecture for scalable UI development.
Tech: React, Firebase, Fuse.js

LEADERSHIP CONTRIBUTIONS

- Mentored 7+ developers**, leading onboarding, conducting code reviews, and establishing best practices to improve code quality and team productivity.

CERTIFICATIONS

- Node and Express Essentials:** Issued by edX — Authorised by IBM
- Foundations of User Experience (UX) Design:** Issued by Coursera — Authorised by Google
- .NET Core & Angular Full-Stack Training Program:** Issued by Ducat
